

■ ELITE ADJUSTABLE KEYBOARD

Our Elite Adjustable Keyboard can help support your posture and the angle of your wrists, hands, and forearms when typing, reducing the risk of Repetitive Strain Injury (RSI). It's the most versatile ergonomic keyboard yet, allowing adjustment of the keyboard horizontally from 0-30 degrees and vertically from 0-60 degrees. Tenting and splaying the position of the keys to your preferences prevents injuries by offering a more natural typing position, taking the pressure off the tendons and joints.

We have updated the design to have a thinner, streamlined aesthetic with a new handle to make tenting and splaying much easier. To adjust, simply squeeze the keyboard's lever to open the ball and locking joint system.

There are two sliding buttons on the back of the keyboard. Simply toggle the PC and Mac mode button to switch to your preferred setting. The other sliding button changes your keyboard layout between Default and an Alternate Layout. You can use a keycap tool to rearrange your keys to match the selected setting.

■ FEATURES AND BENEFITS

- **Versatility:** Adjustable by 0 to 30 degrees horizontally and 0 to 60 degrees vertically
- **Updated handle:** Refreshed handle design enables easier tenting and splaying for your comfort level
- **Compatibility:** Toggle rear switch to use with both PC and Mac devices
- **Flexible layouts:** Toggle the rear switch to enable default or alternate keyboard layouts
- **Long-lasting keys:** Our silicon domed keys are laser-printed so text will last through repeated use and won't wear away
- **Connectivity:** Available as wired. Wireless coming soon!

If It Isn't Adjustable, It Isn't Ergonomic™
